FABRICATION ENGINEERS

Landguard Engineering takes its name from Landguard Fort which was built by Henry VIII in 1543 and dominated and safeguarded the navigable channel into Harwich for many centuries. The goal of Landguard Engineering is to safeguard the interests of our customers by providing quality products and reliable and timely service at competitive prices.

Trial erection of steelwork

Landguard Engineering is located in Harwich adjacent to the International Port: the accessibility of Harwich to people and markets is a key factor in the location of the business as it provides excellent sea connections to mainland Europe and is within 1 to 2 hours of the airports of Stansted, Heathrow, Gatwick, City and Southend. There are excellent road and rail connections to London, Birmingham and Manchester. Harwich is very conveniently located for servicing the growing wind energy developments taking place off the coast of the UK and continental Europe.

We manufacture a wide range of products in mild steel, stainless steel and aluminium for use in onshore, offshore and maritime applications. Working to our own designs or customer drawings, products include

industrial enclosures, skid mounted units, pipe work and pipe racks, exhaust ducts, structural steel work, walkways and balustrades.

Our experienced team of engineers, technicians, welders, pipe fitters and electricians can undertake planned maintenance or emergency onshore and offshore site work, as well as providing mobilisation/demobilisation for vessels in the port or at sea.

Quality and safety are at the core of all that we do. We work to a variety of international quality standards such as DNV, ABS and Lloyds and the company is accredited with ISO9001 and is one of the relatively few UK companies to have acquired Lloyds Registered approval for structural steel work.
